

Stop re-explaining your **playbook** to the AI.

A skill is the GTM work you keep repeating, packaged once. Your agents **load it on demand** and run it the same way every time.

WHAT IS A SKILL

A skill is not a paragraph of hope.

It ships with everything it needs to run the same way every time. Eight parts, locked before it ever sees your work.

Inside one skill · the spec

REUSABLE

01

Model tier

Smart, Sonnet by default

03

Token budget

max 8 turns, then it stops

05

Context

profile + memory + lessons

07

Output format

one fixed shape, every run

02

Tool allow-list

these tools, nothing else

04

Instructions

the operating procedure

06

Quality gate

checks before it returns

08

Run mode

inline or forked agent

A GOOD SKILL

Cold email, with **no babysitting**.

It researches the lead, drafts one email, then holds it against six checks. Fails one, it rewrites itself. Passes all six, it returns.

/specter · **cold-email**

Smart · max 8 turns
forked · 5 tools

research

>

draft

>

6-point gate

>

return

THE 6-POINT QUALITY GATE

one **specific** mention

subject under **6 words**

body under **150 words**

exactly one CTA

reads like a **human**

zero banned words

No hand-holding. **It will not return an email that fails the bar.**

A BAD SKILL

This is not a skill. It is a **vibe**.

Re-typed into a fresh chat every morning, it lands differently every time. You cannot repeat the good days.

VIBE, NOT A SKILL

"make my GTM better"

✕ ~~Write good emails.~~

✕ ~~Find better leads.~~

✕ ~~Close more deals.~~

No tier. No tools. No steps. No gate. **The agent guesses, and you babysit every output.**

☐ model

☐ tools

☐ steps

☐ gate

ONE LIBRARY

Every GTM job, its own skill.

You describe the job in plain English. Ultron routes to the skill that owns it, across five lanes.

RESEARCH

4

competitive analysis

company deep-dive

pricing research

meeting prep

LEAD-GEN

LinkedIn post

social content

OPS

2

morning briefing

pipeline review

35+

skills, one chat box

SKILL + GATE

The skill drafts. The gate **ships**.

A skill decides how the work gets done. The gate decides what is allowed to leave. You want both.

SKILL

how the work gets done

- picks the model and the tools
- runs the operating procedure
- drafts the work, end to end

GATE

what is allowed to ship

- the quality gate auto-checks
- the human gate holds the send
- nothing ships until you approve

IT COMPOUNDS

Every run makes the next one sharper.

A skill saves what worked, what failed and the correction.
The next run loads the lesson before it starts.

MEMORY · cold-email

50 runs logged

- run 50 · today
"Series B angle" booked the call
saved as a **win**, the next draft opens with it
- run 33 · Jun 06
subject ran to 8 words
tightened to 4, lesson stored
- run 19 · May 29
gate caught "leverage"
auto-revised, banned word logged
- run 04 · May 21
first baseline draft
where the skill started

THE FULL LIBRARY

Want the whole skill map?

35+ skills across research, lead-gen, sales, content and ops. The library I run my GTM on, with the model tiers and quality gates already wired in.

Comment **PLAYBOOK** and I will send you the full Ultron skill map.

Follow for one AI system for founders every day.
