

ULTRON CHAT

ONE BOX. TWELVE JOBS.

Every GTM job opens in the same place, with the same memory underneath it. *No new tab, no blank screen.*

12

ONE COMPOSER

TWELVE JOBS

WHAT ONE BOX CARRIES

The composer is not a chat window. It is the input to a system.

01**Five agents behind one slash**

/cortex, /specter, /striker, /pulse, /sentinel

SLASH

02**A tier picker on every turn**

Lite for lookups, Smart for the work, Deep for judgement

TIER

03**Memory injected per turn**

profile, saved facts and open work, stitched in

BRAIN

04**Attachments it actually reads**

PDF, image, audio, spreadsheet, URL become context

FILES

THE SLASH MENU

Type the name of the job. The agent that owns it answers.

/CORTEX

Research

people, companies and markets into one ranked brief

/SPECTER

Outbound

cold email, follow up, multi step sequences

/STRIKER

Deals

qualification, objections, proposals, close plans

/PULSE

Content

posts, launches and newsletters in your voice

/SENTINEL

Code

reads, writes, tests and ships, opens the PR

/COUNSEL

Legal

NDAs, MSAs and term sheets, flags the risk

BEFORE THE ONE BOX

The same work, on either side of a single change.

THE TAB SPRAWL

6 tabs

- a tab for research
- a tab for the CRM
- a doc of prompts you keep rewriting
- a notes file you paste from daily

ONE COMPOSER

1 box

- every job in the same place
- memory already underneath it
- agents one keystroke apart
- sessions searchable in the sidebar

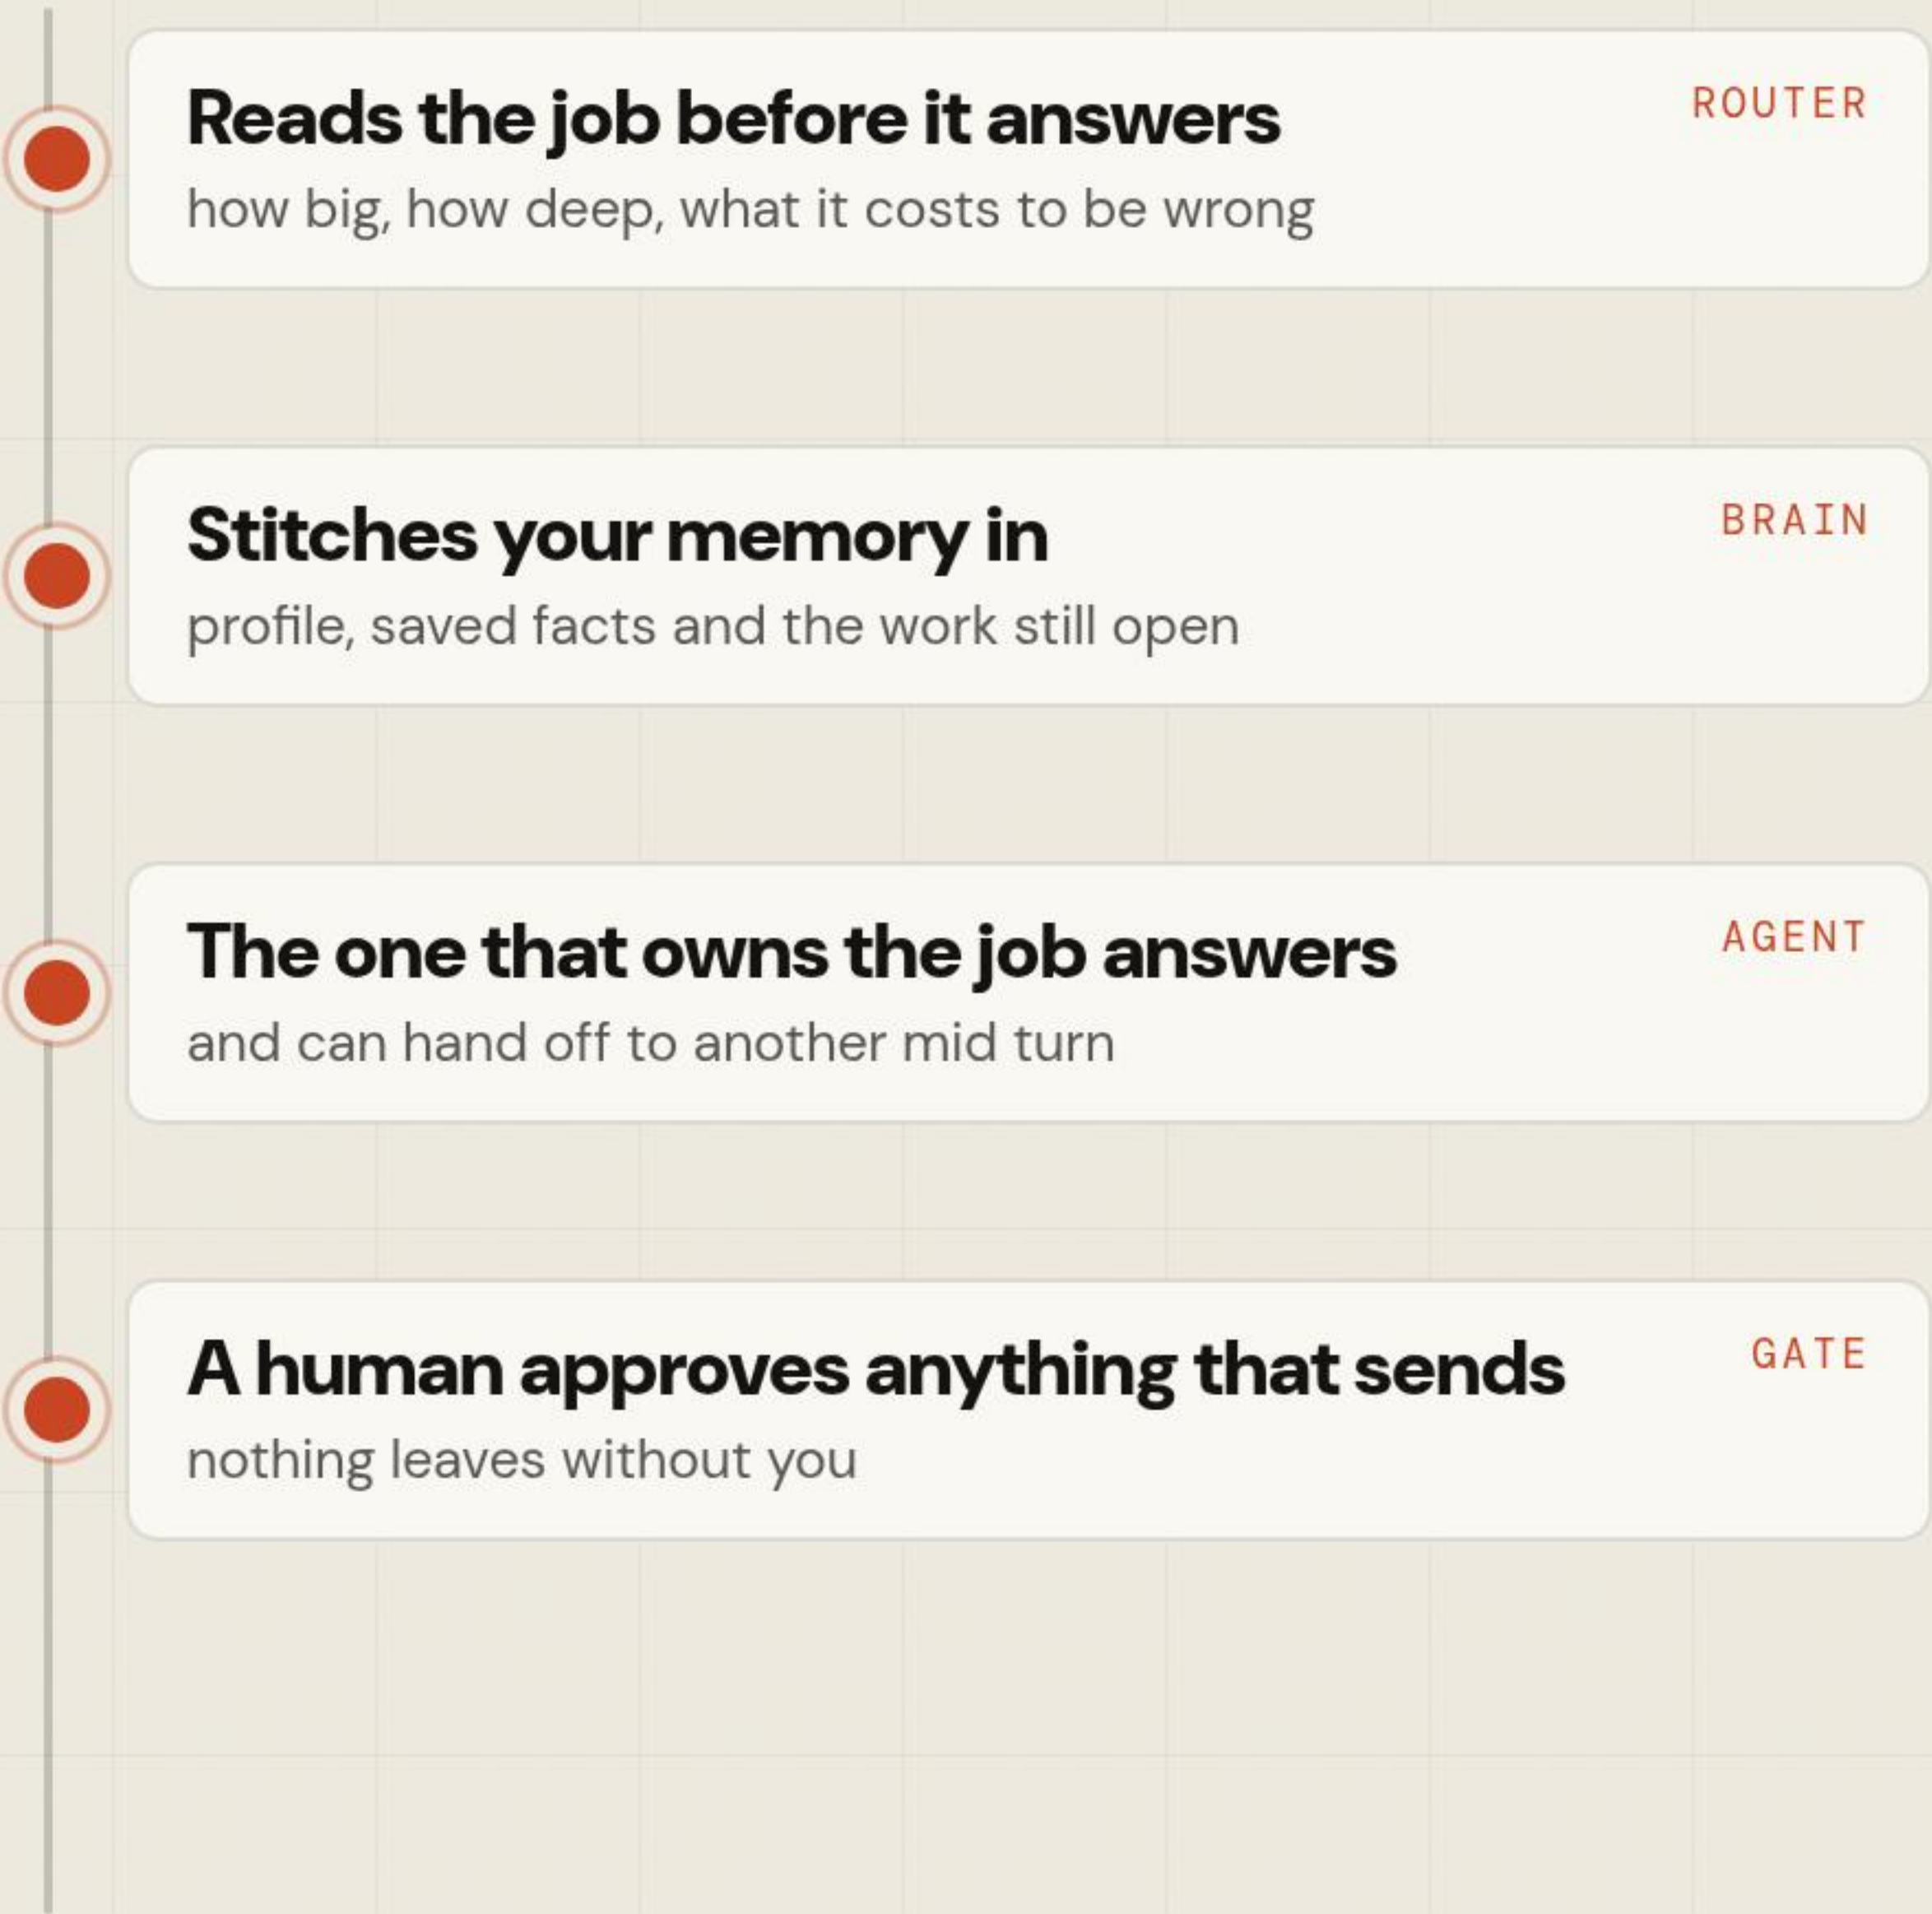

THE CHANGE

context stopped being your job

WHAT A **TURN** ACTUALLY DOES

Between your keystroke and the answer, four things happen.

COMMENT

CHAT

and I will send you the twelve part map of the composer.

01 Five agents behind one slash

02 A tier picker on every turn

03 Memory injected before the answer

WHERE IT LIVES
