

THE BUILDER

A SENTENCE TO A LIVE URL.

No repo to clone, no pipeline to configure, no engineer to interrupt. *You describe it, it ships it.*

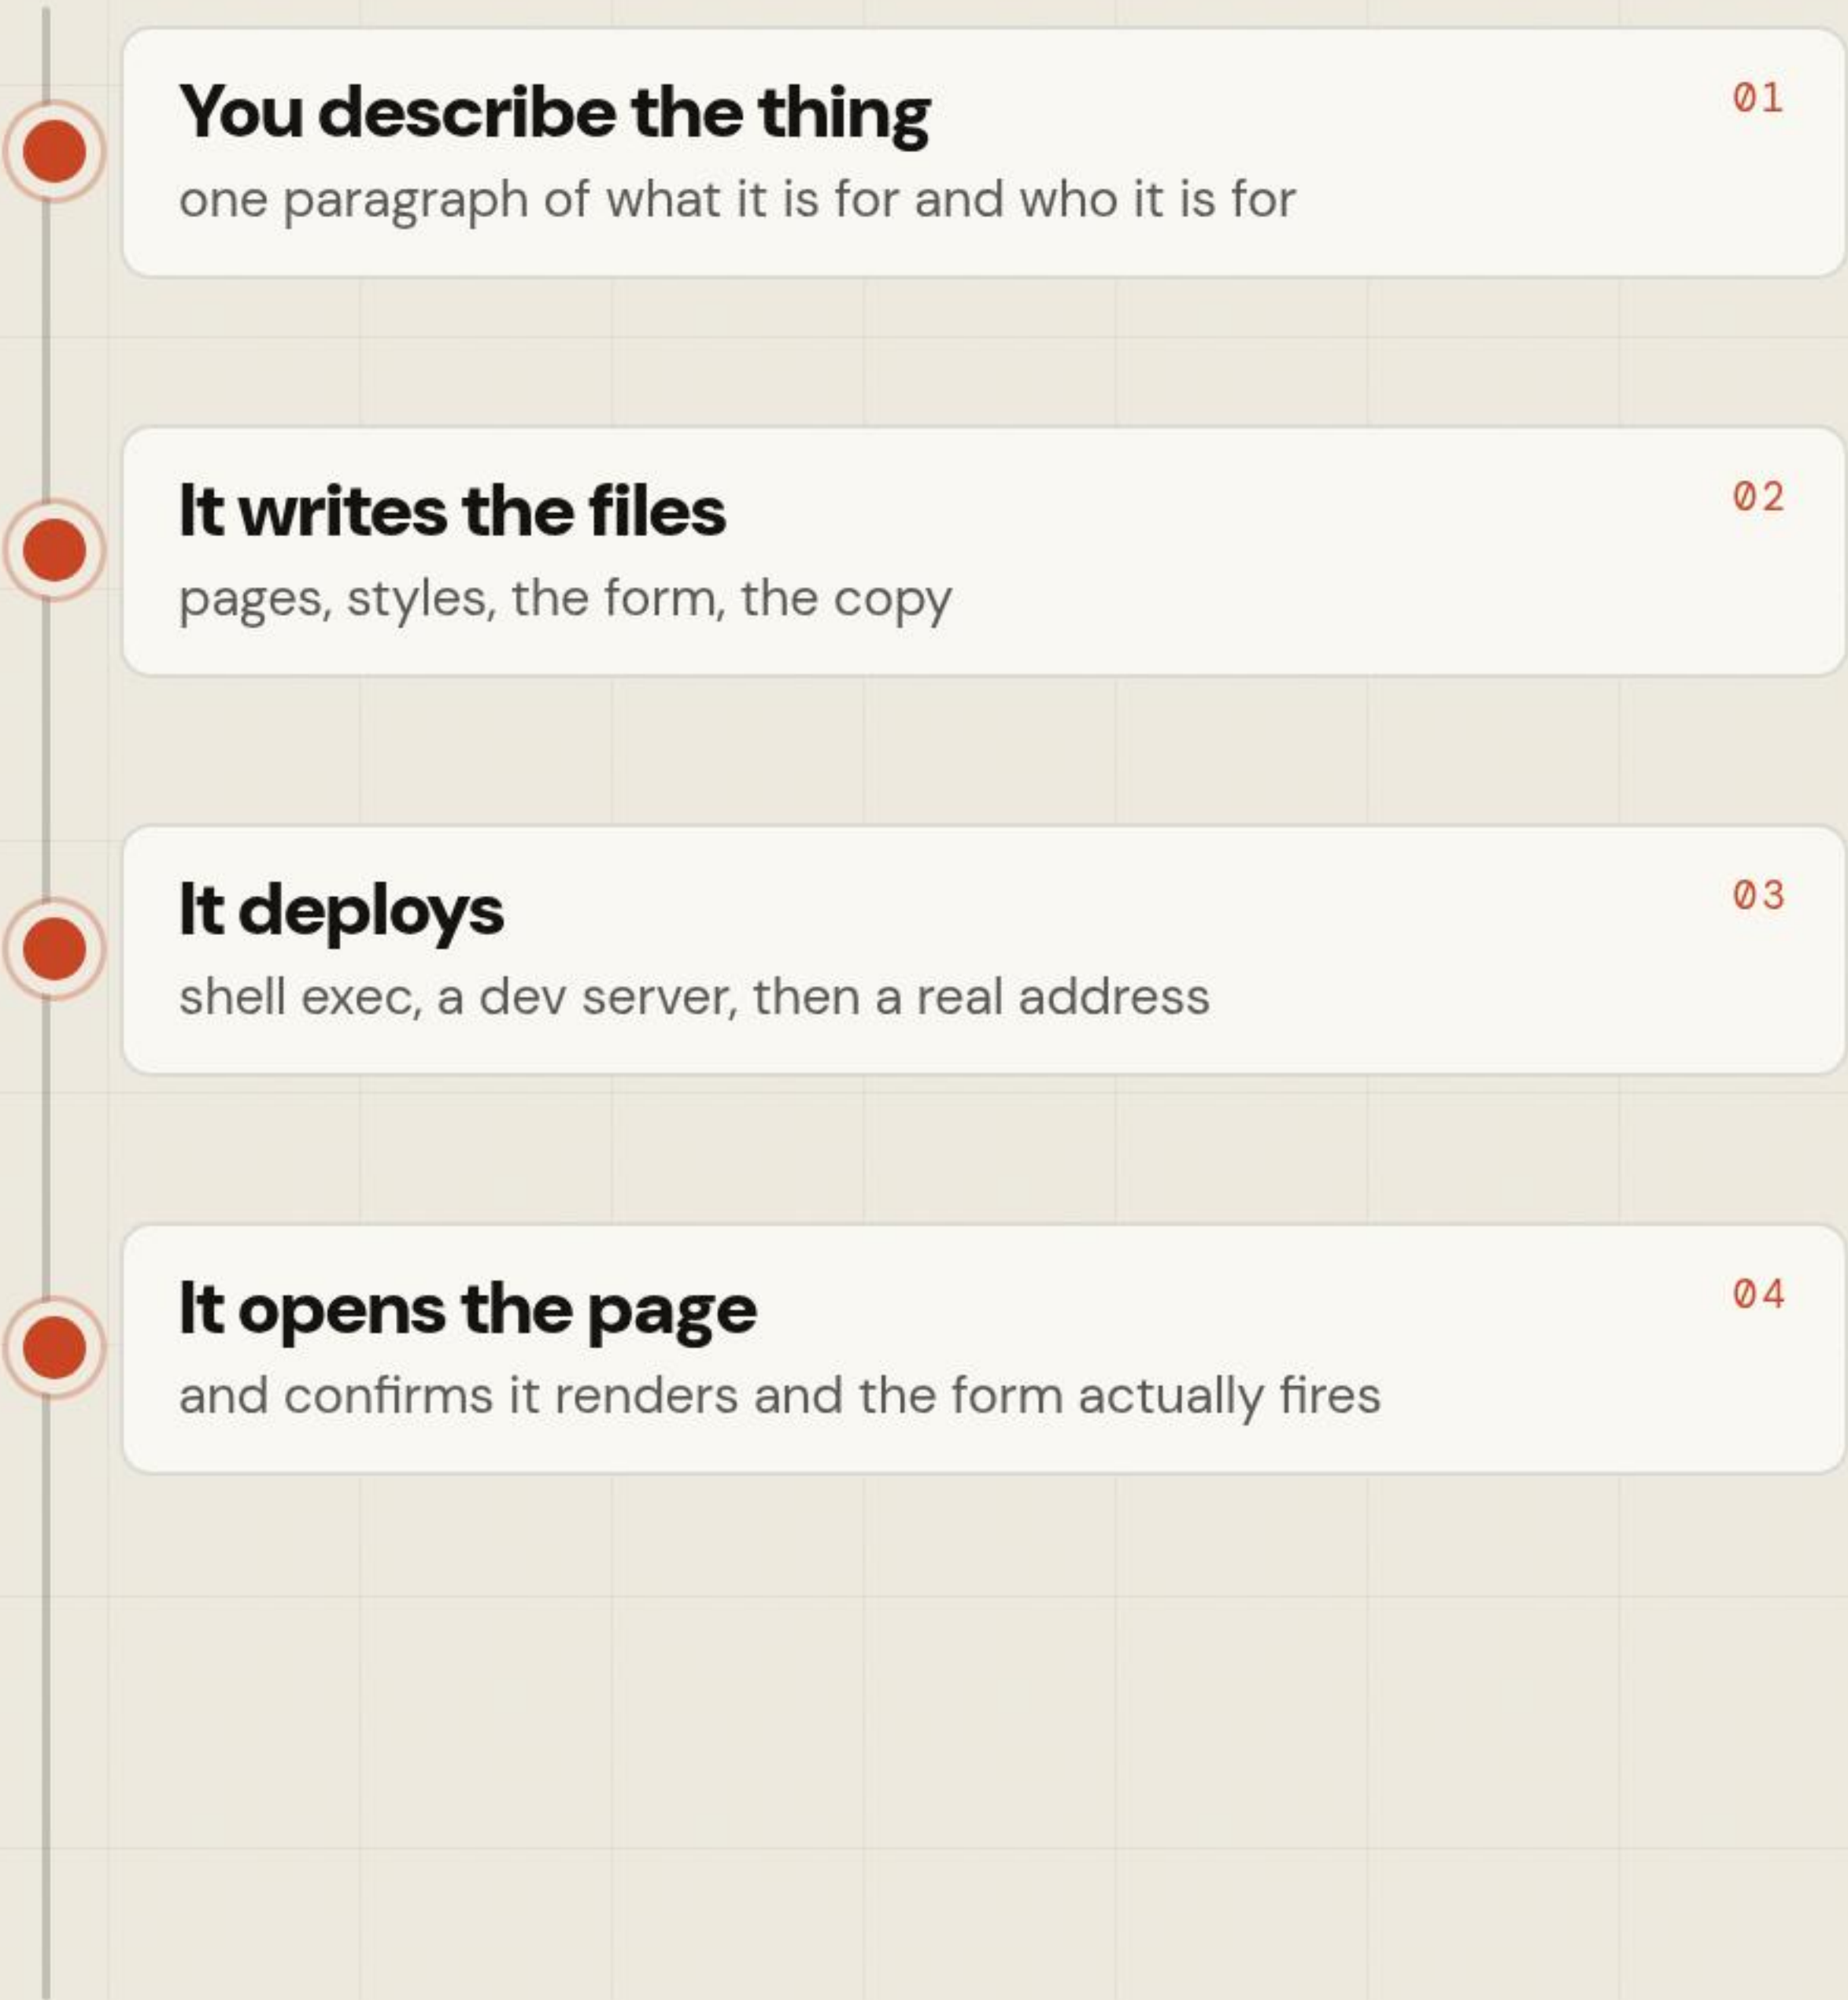

1

SENTENCE IN

ONE URL OUT

THE PIPELINE

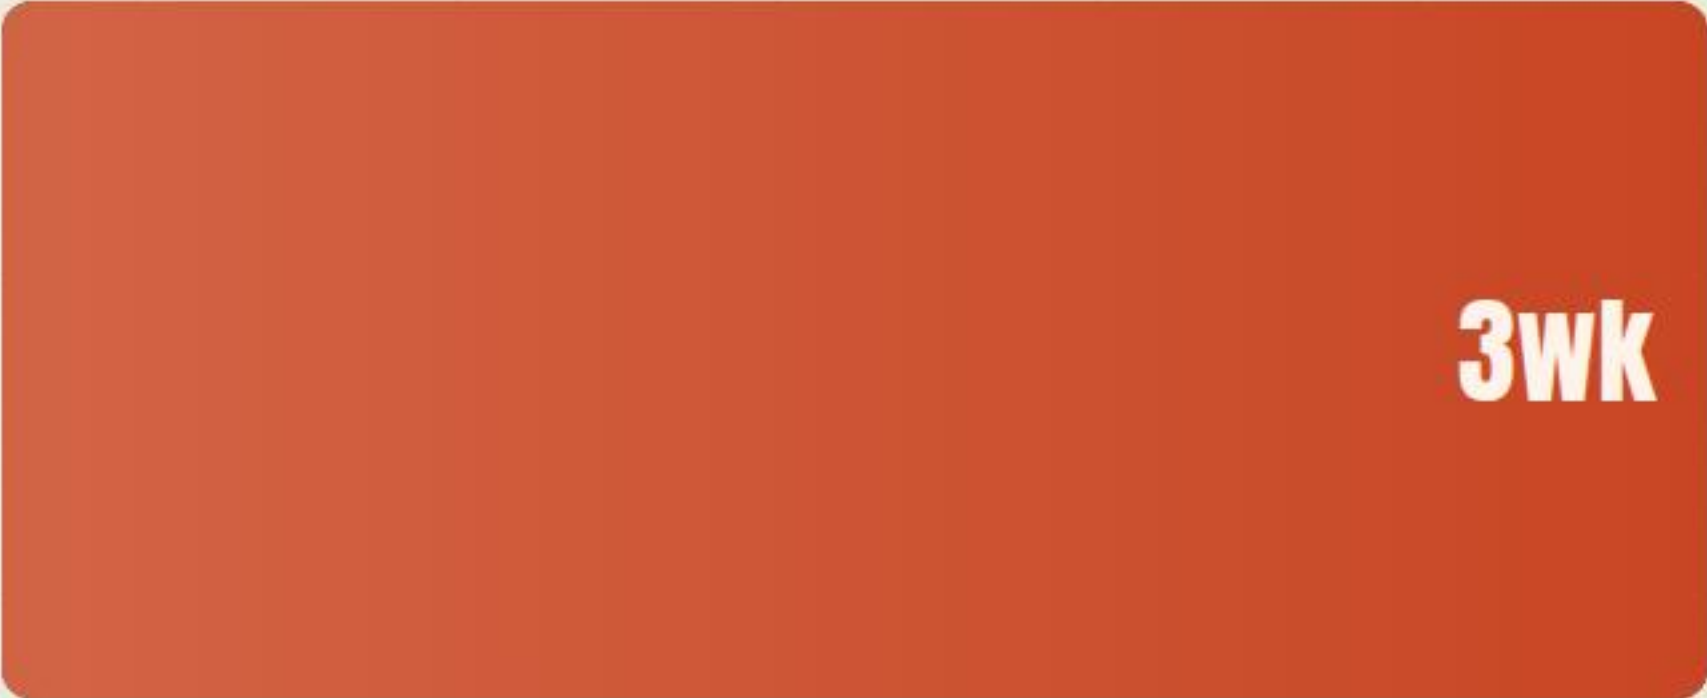

Four steps, none of which you run.

WHERE THE TIME WENT

The same landing page, measured on either side.

**Briefing an
agency**
ROUND TRIPS
BEFORE A DRAFT

Doing it yourself
EVENINGS YOU
WILL NOT GET
BACK

The builder
ONE SESSION,
VERIFIED

THE CAVEAT

you still write the offer

WHAT SHIPS WITH IT

Not a mockup. The things a page needs to actually work.

- 01

A real address

not a preview link that expires on Friday

LIVE
- 02

A form that fires

tested by opening it, not by assuming

TESTED
- 03

Copy in your voice

PULSE writes it from your own material

PULSE
- 04

The pull request

if it belongs in the repo, SENTINEL opens it

SENTINEL

MOCKUP VS SHIPPED

The gap most AI builders never close.

A MOCKUP

a picture

- looks finished in a screenshot
- nothing behind the button
- someone still has to build it
- the estimate starts now

SHIPPED

an address

- you can open it on your phone
- the form writes somewhere real
- verified before you saw it
- changes are another sentence

THE TEST

can you send the link to a customer

COMMENT

BUILDER

and I will send you the build and deploy setup.

01 A sentence in, a URL out

02 It opens the page and verifies it

03 Changes are another sentence

WHERE IT LIVES
