

SHARED WORK

SEND THE THREAD, NOT THE FILE.

A document is the answer with the thinking cut out. *Hand over the session and the context comes with it.*

1

LINK

WHOLE CONTEXT

WHAT A LINK CARRIES

Read only, but complete.

THREAD

Every turn

the questions, not only the conclusions

FILES

What was attached

the sources it was actually reading

STATE

What is still open

so they see what is unfinished, not just what is done

AGENTS

Who did what

which agent answered which part

DOCUMENT VS SESSION

The handover most teams do badly.

A DOCUMENT

the answer

- the reasoning is gone
- they cannot see what you rejected
- questions come back to you
- it is stale the day you send it

A SESSION

the work

- every turn is there to read
- the rejected paths are visible
- they can fork it and continue
- it stays live while the work does

THE SAVING

the follow up meeting

WHO THIS IS FOR

Founder scale handovers, not enterprise workflow.

- 01

A new hire

send the session instead of a week of onboarding

ONBOARD
- 02

A co-founder

catch up on a thread without a call

SYNC
- 03

An advisor

show the reasoning, get a real opinion back

REVIEW
- 04

A client

read only proof of the work, not a status email

PROOF

THE RULES

Sharing without giving away the keys.

- 

They cannot change your thread

READ ONLY

a fork is theirs, the original stays yours
- 

One session, not the account

SCOPED

a link is a session, never the workspace
- 

Turn it off

REVOCABLE

the link stops working the moment you say so
- 

Sending still needs you

GATED

a viewer can read the work, never send from it

THE PRINCIPLE

share the work, keep the gate

COMMENT

SHARED

and I will send you how session sharing is scoped.

01 One link, whole context

02 Read only, forkable, revocable

03 Viewers can never send

WHERE IT LIVES
