

ONE CHAT BOX

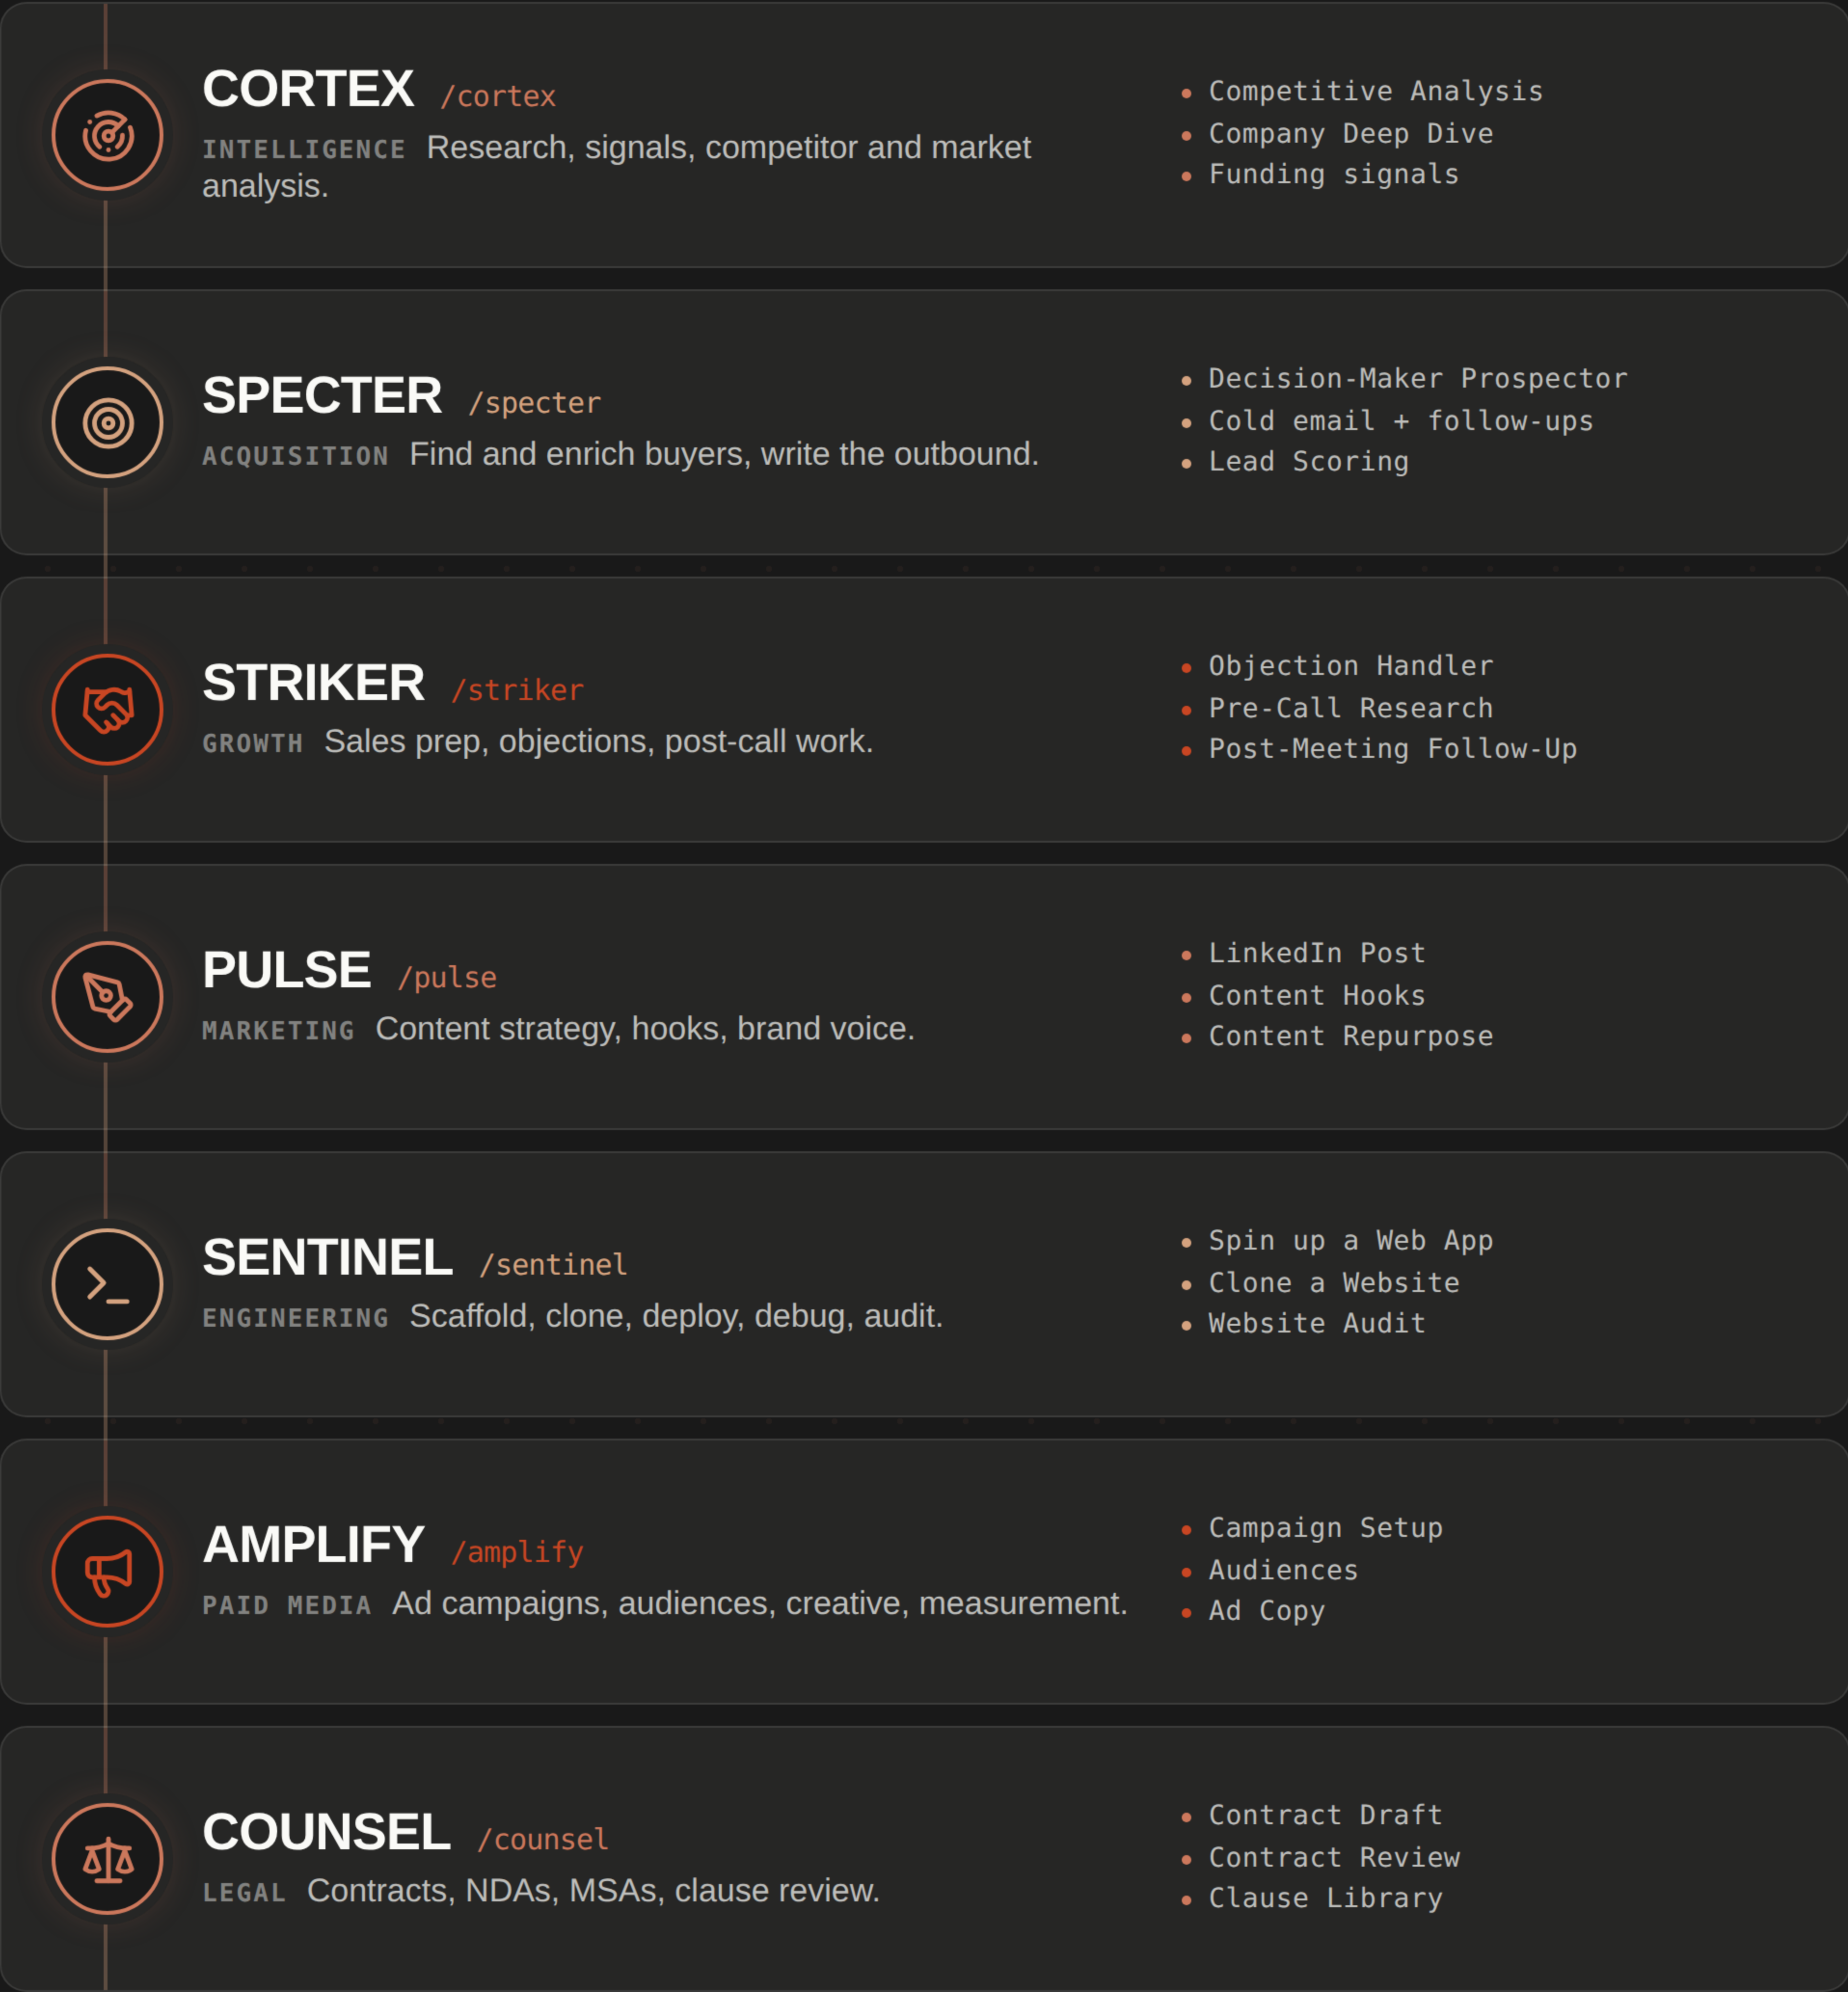

7 agents. 71 skills. One box.

Most AI is one model in a chat box. Ultron is a team of specialists you call by name, or just describe the job to. **You stay on the gate.**

71 SKILLS	8 CATEGORIES	7 AGENTS	3 TIERS
---------------------------------	------------------------------------	--------------------------------	-------------------------------

Call one by name, or just ask

You ask. **It routes, runs, stops.**

1

Type **/cortex**, or just ask

a slash command, or plain language the router reads

2

The router picks **1 of 71 skills**

scoped to the right agent, with only its allowed tools

3

It runs in a **tool-calling loop**

search, enrich, draft, build, call tools until the job is met

4

Stops when the work is done

every step logged, you approve before anything ships

WORKHORSE

Deep

HARD JUDGEMENT
AND REASONING

Stop picking tools. **Just ask.**

Seven specialists, seventy-one skills, one chat box. **You describe the job, the right one runs it.**

01 Call an agent with a **slash command**, or just describe the job

02 The router picks **1 of 71 skills** and the model tier

03 It runs the tool loop and **stops when done**, you on the gate
