

ONE PROMPT

YOU NEVER PICK THE MODEL. AGAIN.

Every other tool opens by asking you a
question you cannot answer.

Nobody knows which model wins a job before they see the
output.

ULTRON · 51ULTRON.COM

THE READ

IT READS THE **JOB** FIRST.

Four reads, before a single token of output.

How big it is, how deep it goes, what wrong costs, and how fast you need it.

VOLUME

How big

forty accounts or one
answer

DEPTH

How deep

a lookup or a judgement

RISK

**Cost of
wrong**

you review it, or a customer
sees it

SPEED

How fast

now, or by morning

ULTRON · 51ULTRON.COM

THE PICK

THE TIER AND THE EFFORT.

Two decisions, not one, and neither of them is
yours.

Haiku on low for lookups. Sonnet on high for the work.
Opus when it is hard.

01

Haiku 4.5, low

lookups, classifying, high volume

02

Sonnet 5, high

the standing default

03

Opus 5, xhigh

hard judgement, strategy

READ →

PICK

→ RUN → PAY

ULTRON · 51ULTRON.COM

THE RUN

ONE INPUT. EIGHT **JOBS.**

Research, enrichment, scoring, outbound,
prep, proposals, objections, close.

Run all eight through one model and it is the right tool for
exactly one.

ONE MODEL, 8 JOBS right for one of them

ROUTED, 8 JOBS

right for all eight

CONTEXT

held across every one

READ → PICK → **RUN** → PAY

ULTRON · 51ULTRON.COM

THE BILL

YOU STOP OVERPAYING FOR LOOKUPS.

The cheap model runs the cheap work.
Automatically.

Haiku is a third of Sonnet on the volume that never needed
more.

THE SPREAD

1X 3X 5X 10X

HAIKU TO FABLE

PER MILLION TOKENS

READ → PICK → RUN → PAY

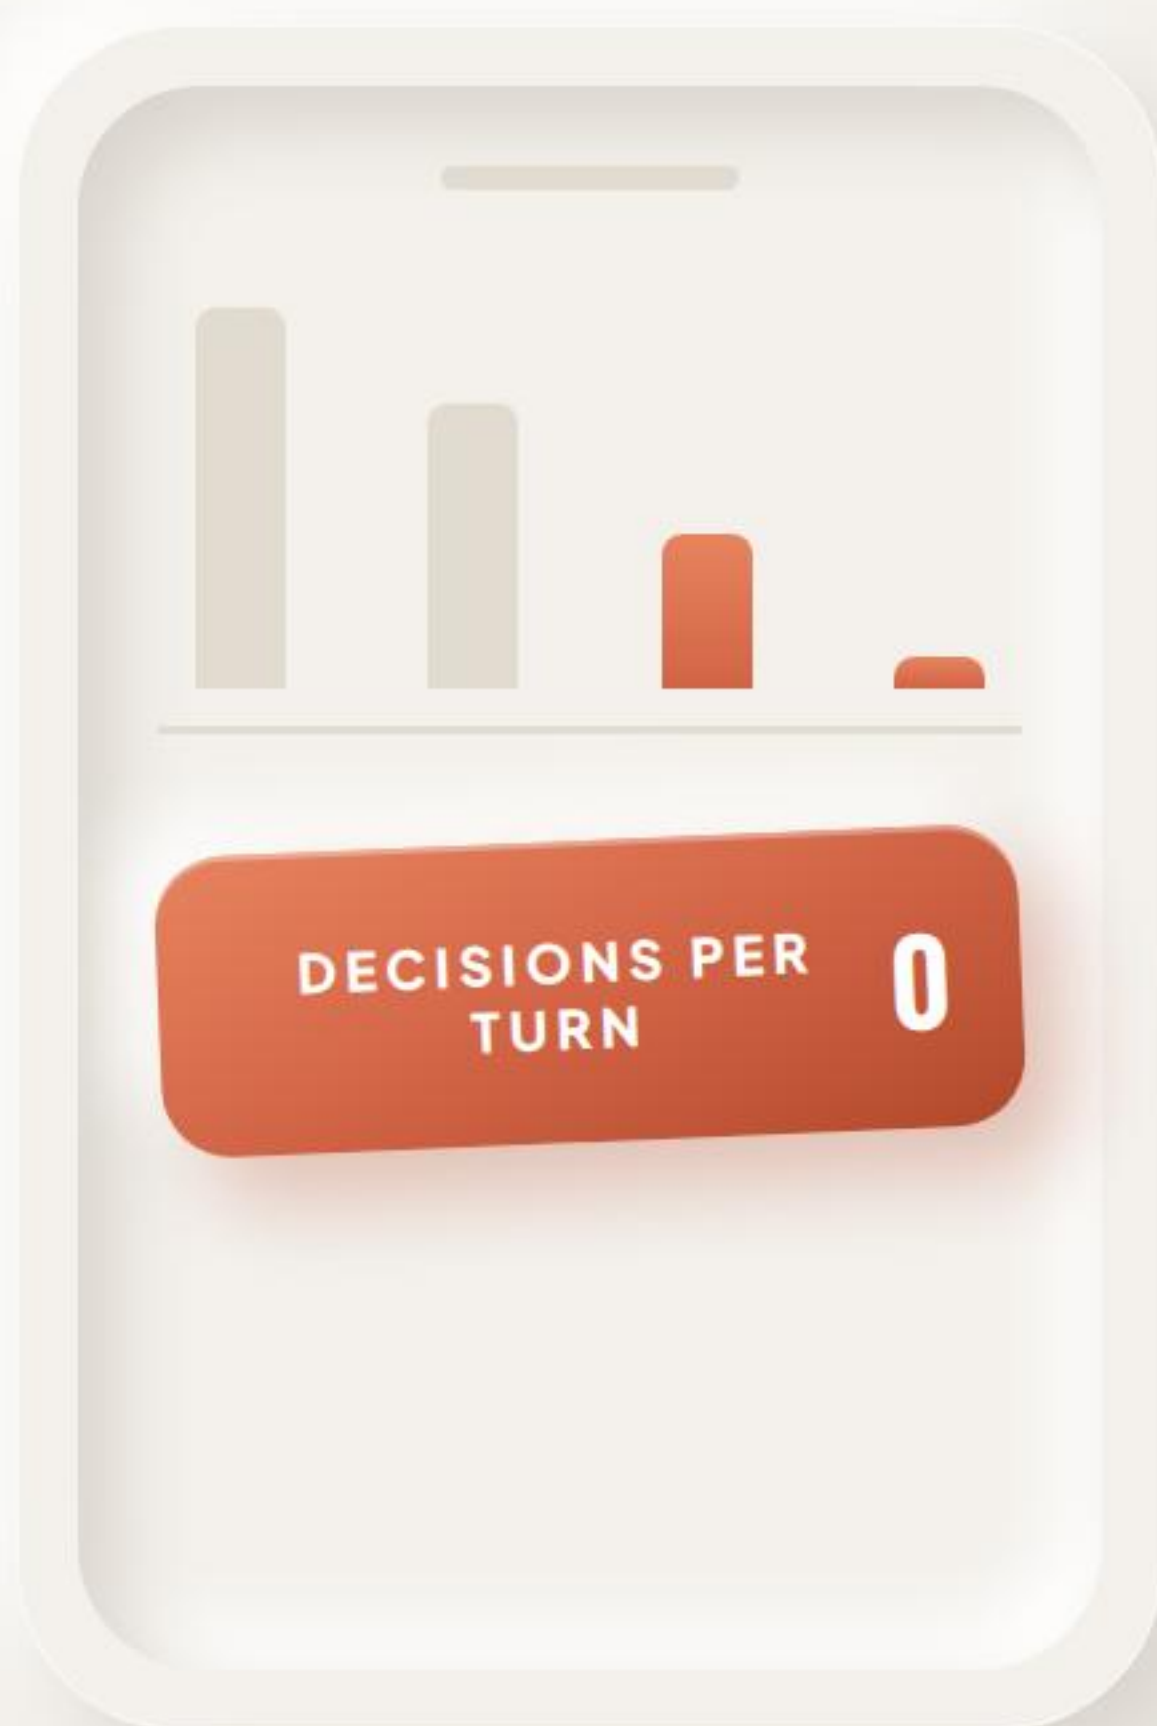

ULTRON · 51ULTRON.COM

WHAT ACTUALLY CHANGED

THE TOOL STOPPED ASKING YOU TO **RUN IT.**

Model choice was never a preference. It is a routing problem.

Routing problems belong to the system, not the person using it.

COMMENT

ROUTER

and I will send you the routing setup.

What it reads, and how it picks the tier and the effort.
