

Claude picks the tool **before** it picks the words.

Connect your apps. One ask routes each step to the exact tool, runs it, and waits for your yes before anything ships.

Research

web search

Draft the intro

email

Charge the deal

waiting for you

SEE HOW IT ROUTES →

Most AI has tools. **It grabs the wrong one.**

A model with a pile of tools and no routing just guesses. The engine is picking the **right** one, fast.

web search	scrape	enrich
find people	CRM	deals
sequences	email	calendar
content	carousels	analytics
Slack	Notion	Drive
Stripe	sandbox	approval

Dozens of tools. **Which one fires** for what you just asked? That decision is the whole game.

One ask. Every step routed.

Research the account → ✓ web search

Find the buyer → ✓ people data

Update the CRM → ✓ CRM

Draft the intro → ✓ email

Offer 3 slots → ✓ calendar

Post to the team → ✓ Slack

Read the revenue → ✓ Stripe

Charge the retainer → 🔒 waiting for your yes

It runs everything. It ships nothing without you.

Reads, drafts and lookups run on their own. The moment a step is irreversible, it stops.

Charge the retainer
WAITING FOR YOUR YES

Approve

Runs free

search the web
enrich a lead
draft the email
read the revenue
update the CRM

Waits for you

send the email
charge the card
post publicly
deploy a change
delete anything

Stop guessing which tool. **Route it.**

1 ask routes to the right tool, not a guess

92 tools on tap, the dispatcher picks one

0 irreversible steps without your yes

Comment **ENGINE** and I send you the routing map
