

your terminal, leveled up

Claude Code in 2 minutes

It is not autocomplete. **It is a coding agent that plans, edits and tests.**

~/acme-api - claude

```
$ claude
```

```
Claude Code · Sonnet · 91 tools ready
```

```
> add rate limiting and test it
```

The whole loop is **5 moves**

1 `$ claude` Start it in any project folder

2 `/init` It reads your repo, writes a **CLAUDE.md**

3 `shift + tab` Plan mode: it **thinks before** it edits

4 `let it run` It edits, tests, **fixes its own errors**

5 `/resume` Pick up any past session, full context

You ask. **It ships.**

● ● ● ~/acme-api – claude

> add rate limiting to the API and test it

● Plan · shift+tab

1. middleware/rateLimit.ts

2. wire into 3 routes

3. write 6 tests

● Editing 4 files

middleware/rateLimit.ts +38

routes/auth.ts +2

● Running tests

✓ **6 passed** in 1.2s

> Done. Opened PR #214 .

A teammate, **not a toy**

Remembers your repo

CLAUDE.md keeps your rules and context across sessions

Plans before it codes

Plan mode shows the steps, you approve before it edits

Fixes its own errors

Runs the tests, reads the failures, retries until green

Open the terminal. Type **claude**.

\$ **claude** · start in any project

/ **init** · give it your repo as memory

■ **plan, run, /resume** · the whole loop

COMMENT **CODE** →

and I will send you a starter CLAUDE.md and the setup.
